SUMMARY

JWPT-certified penetration tester and Computer Science undergraduate specializing in web application security, VAPT, and offensive security tooling. Hands-on with Burp Suite, Nmap, SQLMap, and OWASP methodologies. Combines an attacker's mindset with strong full-stack development skills to find, exploit, and remediate real vulnerabilities.

EXPERIENCE

Penetration Tester — Intern

Jun – Jul 2026

HackersDaddy Cyber Security Solutions · London, UK (Remote)

- Performed OWASP Top 10 vulnerability assessments and full VAPT audits on real-world web application lab environments.
- Conducted reconnaissance, scanning, and manual exploitation using Burp Suite, Nmap, OWASP ZAP, and SQLMap.
- Executed API security testing and authored professional reports with severity ratings and remediation guidance.
- Cleared the Junior WebApp Penetration Tester (JWPT) exam; selected via the competitive 'Hashes Over Roses 3.0' event.

CERTIFICATIONS

- Junior WebApp Penetration Tester (JWPT)** — HackersDaddy Cyber Security Solutions (2026)
- Google Cloud Digital Leader** — Google Cloud (2026)
- Python Programming Track** (6 courses) — DataCamp • **Git & GitHub Track** (7 courses) — DataCamp • **MATLAB Onramp** — MathWorks

SECURITY & TECHNICAL SKILLS

Offensive Security	VAPT, OWASP Top 10, Web App Pen-Testing, API Security Testing, Reconnaissance, Exploitation
Security Tools	Burp Suite, Nmap, SQLMap, OWASP ZAP, Kali Linux
Languages	Python, TypeScript, JavaScript, C/C++, Dart
Development	React, Node.js, Express, Flask, Flutter, SQLite, Firebase
Cloud & Tools	Google Cloud, Git, GitHub

PROJECTS

CTF Toolkit — Automated Pentest Suite

Python, Nmap, SQLMap

Modular CLI that chains reconnaissance, web exploitation (SQLi, XSS, LFI), crypto solving, and hash cracking into one automated pipeline with report generation.

Wazabi — Full-Stack E-Commerce Platform

React, TypeScript, Express, Razorpay

Production e-commerce site (live at wazabi.in) with secure JWT auth, Razorpay payments, cart/checkout, and an admin dashboard — built with security best practices.

AI Image Generator

Python, PyTorch, Flask, GANs

Trained custom GAN and Autoencoder models from scratch on CUDA to generate class-based images; served via a real-time Flask REST API.

MemSee — CPU Addressing Mode Visualizer

React, TypeScript, Google Gemini AI

Interactive tool simulating CPU data flow (IR, ALU, MAR, Memory) across 6 addressing modes, with AI-powered explanations via Google Gemini.

EDUCATION

B.Tech, Computer Science & Engineering

2025 – 2029

Karunya Institute of Technology and Sciences, Coimbatore — Specializing in Cyber Security, AI/DL & Full-Stack Development
